

# Raising quality standards

Raised access floor manufacturer Nesite caters to the medium-high market segment and focuses on product quality and customer service

> Augusto Di Pietro, Regional Manager

**N**esite, owned by Transpack Group Service and boasting more than 40 years of experience, is an original and exclusive manufacturer of raised access floor for a wide range of applications both in commercial and industrial buildings.

Nesite caters to the medium-high market segment, and focuses on product quality and customer service. According to the company's philosophy Nesite offers the best of raised access floors, paying particular attention to performance and ensuring that the products are highly specialised.

Thanks to more than 10 million square metres of raised floor installed all over the world, Nesite has emerged as a leader in this field and acquired enough experience to meet its customers' requirements. It is also competent in developing and maintaining high performance raised access floors.

The company's operations received a fresh boost with the opening of a new production unit in the United Arab Emirates called Floor System Company. This unit produces and sup-

plies Nesite raised floor, maintaining the same quality as products made in Italy.

The decision to set up the UAE unit was taken because of a keenness to serve a strategic and developing region like the Middle East.

Floor System Company is oriented towards environmental sustainability, hence the company's production helps the buildings, where Nesite's raised floors have been installed, to obtain LEED certification.

Nesite raised floor production fo-

cus on two panel lines, both of which are able to satisfy the requirements of any project: High Class and Standard Line. The former is devoted to elegant and premium raised floors, while the latter is a more industrialised production.

Thanks to the research and development efforts of the company's team of technical experts and their continuous exchange of ideas with designers and architects, Nesite has exponentially increased its own value by participating in prestigious projects.

**NESITE®**

High performance raised floor.  
Behind your most important projects.

More than 10.000.000 sqm of raised floor installed during last 40 years.

## SUSTAINABILITY FIRST PRIZE

**Christchurch Civic Building,** has just been defined as the most environmentally sustainable building in New Zealand, receiving a number of environmental certifications. Nesite contributed to this result, thanks to its raised floor components.
