JUNO IN ART

A canvas of glass and light

nesite.com

Art in the floor space

JUNO IN ART is the Nesite system that integrates **light and artworks** into raised flooring, transforming the walking surface into an expressive canvas.

Presented at Fuorisalone 2026, as part of **Franco Perrotti's** exhibition **From Object to Vision**, the system liberates the floor from its purely functional role, transforming it into a narrative device capable of redefining the sensory experience.

Reorienting the view, from convention to experience

The JUNO IN ART system **shift of the artistic focus from the wall to the floor**, thanks to the integration of artworks into a backlit infrastructure. Art abandons its verticality to become part of everyday life, inviting the viewer to engage in immediate, physical contact.

WE LIVED
ON AN ISLAND

BUT NOT AS WE WOULD HAVE LIKED,
RATHER AS WE WERE ABLE.

WE, TOO,
HAVE TORN DOWN TEMPLES
TO ERECT OTHERS THAT MAY REMAIN
OR BE TORN DOWN IN THEIR TURN.

VIRGILIO PIÑERA

A surface that supports and displays, a synthesis of aesthetics and engineering

JUNO IN ART is made of **high-strength laminated glass**, a design choice that enhances the artwork whilst maintaining the full functionality of the raised floor.

A solution that opens up **endless possibilities in terms of installation**, ensuring aesthetic appeal without compromising engineering quality.

Anatomy of function

GLASS

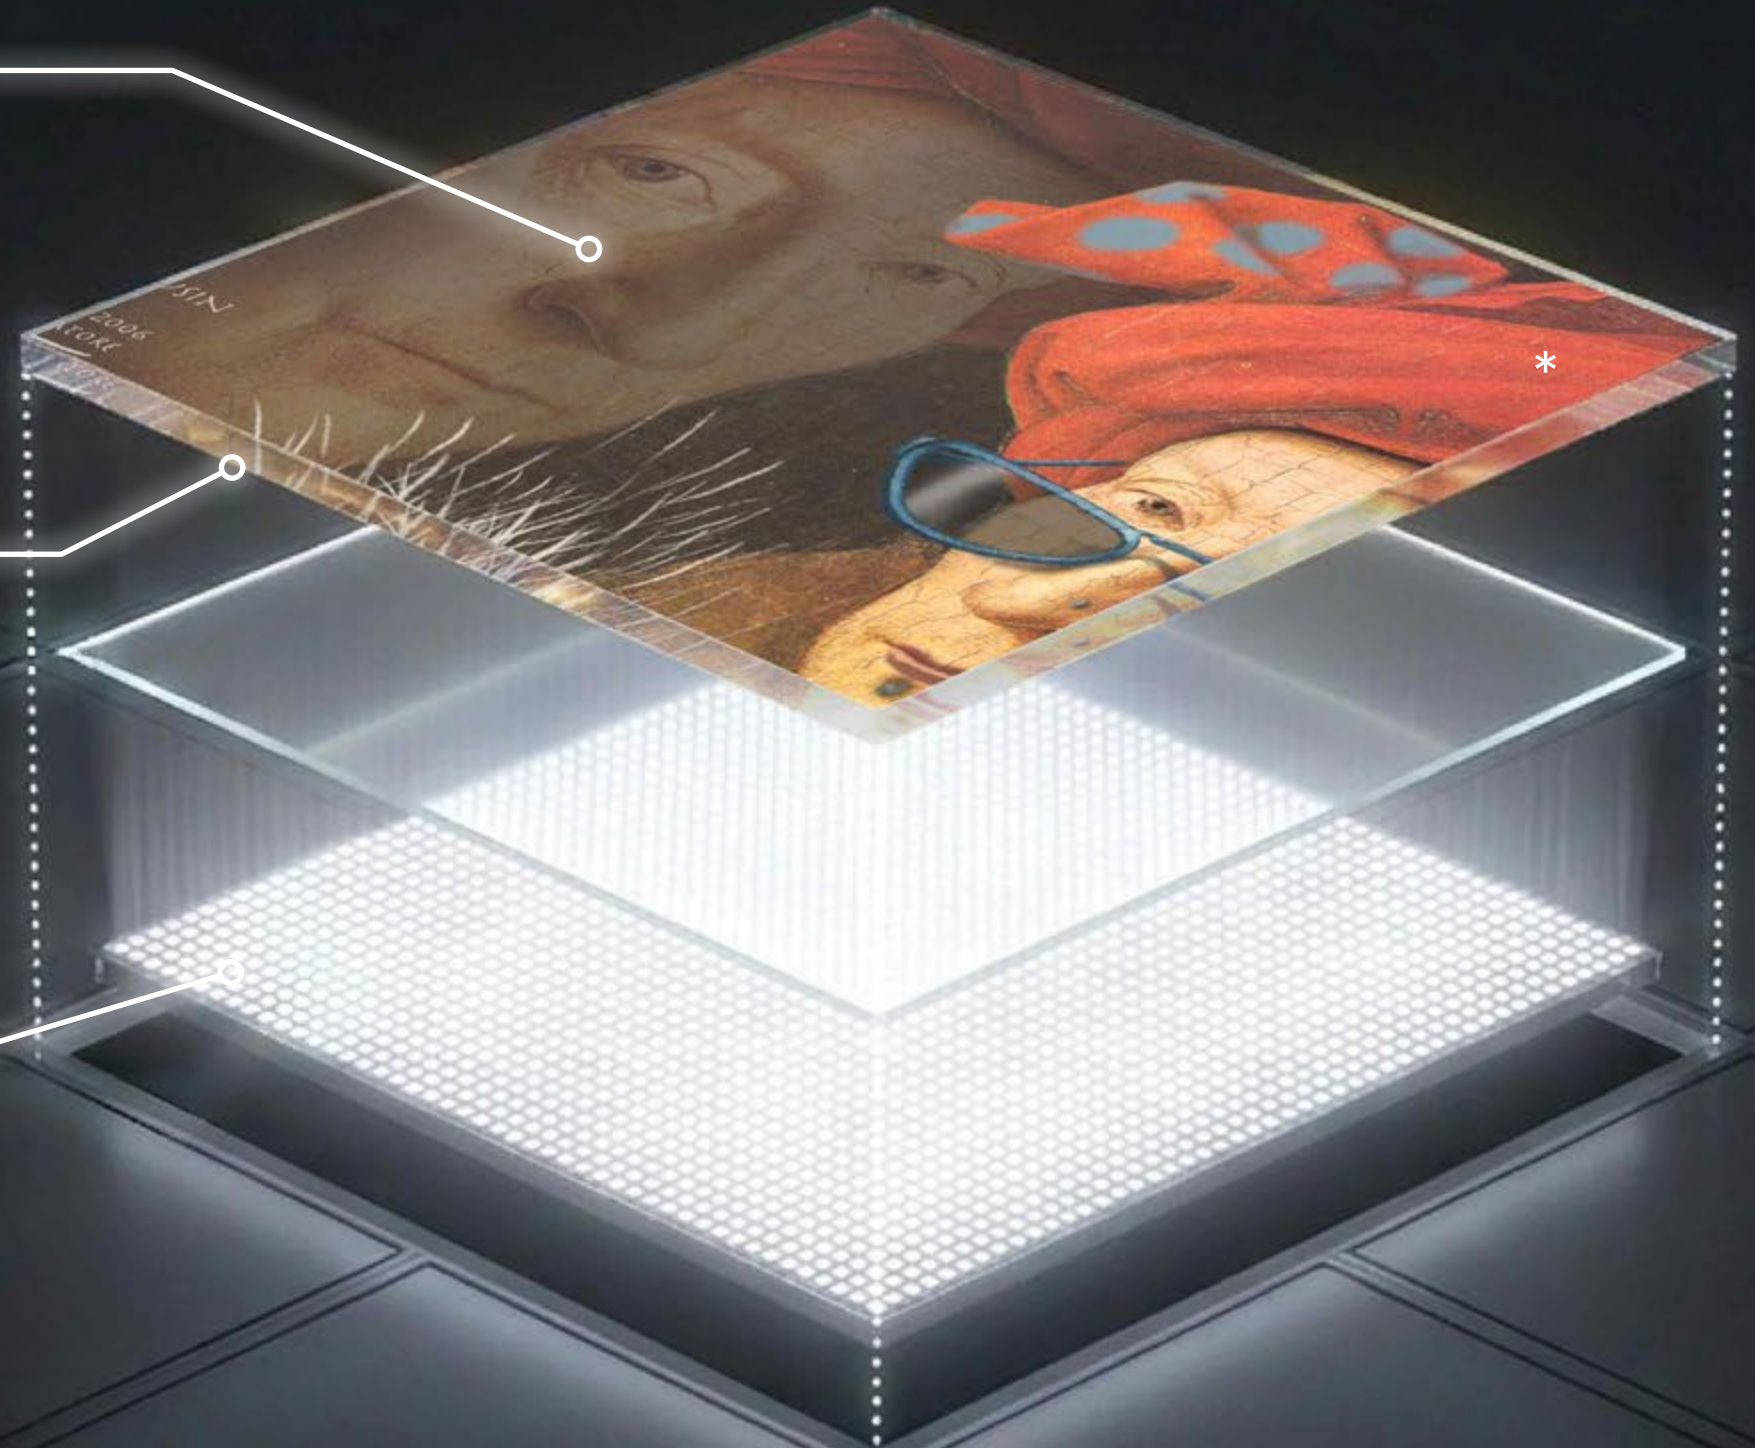

Extreme Light laminated glass, 8 + 8 mm, thick, walkable, designed to integrate seamlessly with the raised floor systems.

PRINT

Translucent backlit print, allowing for uniform diffusion of the underlying light, enhancing the image and amplifying its visual impact.

LED

High-brightness, low-energy-consumption LED matrix, with a minimum lifespan of 30,000 hours and power consumption of just 30 watts.

The JUNO universe

Juno LED

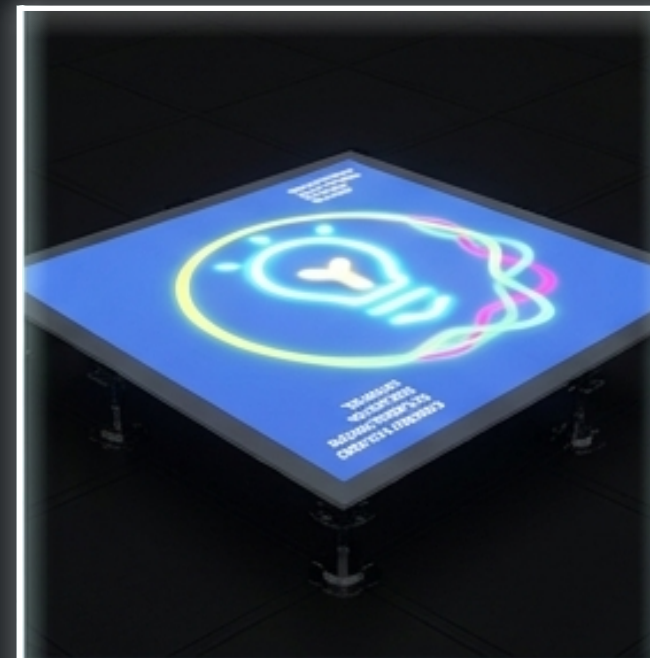

Matte white Solid Surface LED panel, customisable with textures and screen prints. Ideal for creating minimalist and refined light trails.

Juno Smart

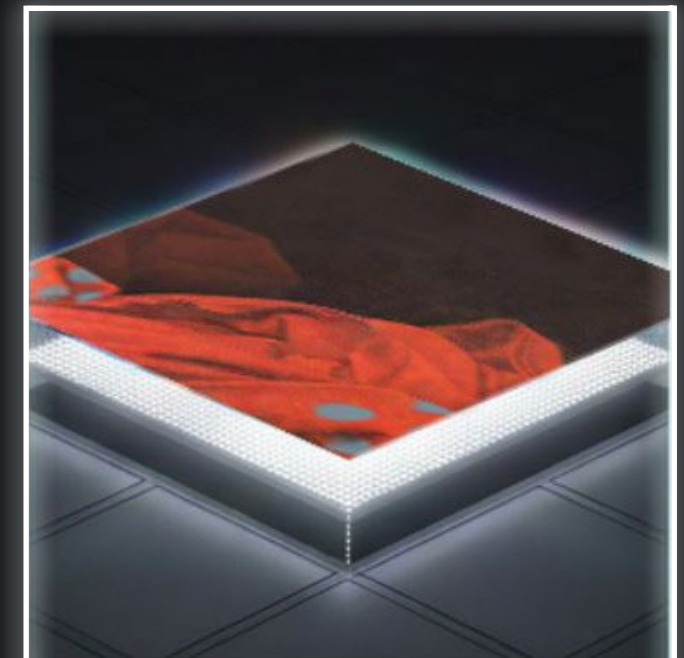

Printed glass panel, responsive to touch. Ideal for recreational and educational applications.

Juno Visual

High-strength tempered glass panel, suitable for floor-level multimedia projections.

Juno in Art

LED panel with backlit artistic print, in laminated glass, extreme light, walkable.

A new awareness of space

With JUNO IN ART, Nesite is expanding the boundaries of the horizontal surface, elevating it from a technical component to an expressive medium that blends innovation, language, and experience.

In this sense, the collaboration with Franco Perrotti and Fortunato D'Amico is not merely an experiment rooted in the exhibition context, but a cultural shift where the floor ceases to be a negligible element of architecture.
